Cordova App via CLI

```
$ cordova create hello com.example.hello HelloWorld

$ cd hello

$ cordova platform add ios
$ cordova platform add android

// Run this to check your current set of platforms:
$ cordova platforms ls

// Run either of the following synonymous commands to remove a platform:
$ cordova platform rm android

// Run the following command to iteratively build the project:
$ cordova build

$ cordova emulate android

// Alternately, you can plug the handset into your computer and test the app
directly:
$ cordova run android

// The cordova plugin add command requires you to specify the repository for
the plugin code. Here are examples of features you might add:
$ cordova plugin add https://git-wip-us.apache.org/repos/asf/cordova-plugin-
geolocation.git

// Use plugin ls to view currently installed plugins. Each displays by its
identifier:
$ cordova plugin ls
```

chrome://inspect/#devices

Zet ALTIJD handmatig in index.html de verwijzing naar Cordova.js
```
<!-- Path to Cordova.js-->
<script type="text/javascript" src="cordova.js"></script>
```
